

Nursing Research Webinar

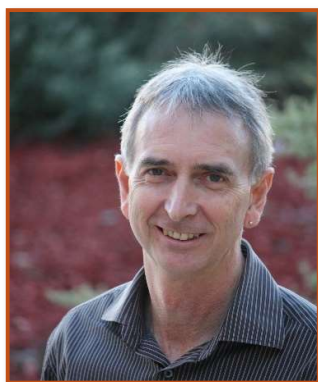

Nursing Research to Promote TB Elimination
within Australia and the Pacific

Thursday

10th October

2pm – 3.15pm
AEST

Nurses comprise the largest proportion of the global TB workforce and are essential to global TB elimination efforts. Progress towards TB elimination requires a nursing workforce that can deliver best-practice, evidence-based care to achieve optimal treatment outcomes and prevent the emergence and spread of TB. To underpin practice, drive change and innovation, nurses undertake research. Nursing research identifies areas where there may be gaps in knowledge, and where current practices may be outdated or ineffective, prompting the need for new approaches in policy and practice. By investigating new technologies, treatment, models of care and program advocacy, nursing researchers contribute to the evolution of healthcare delivery. In this webinar nursing research groups will share their experiences in research activities and outcomes to support TB elimination efforts in Australia and the Pacific region.

Associate Professor Peter Massey

Hunter New England Public Health Unit of James Cook University

Presentation: *Nurses make great researchers*

Dr Chris Lowbridge

Menzies Research Institute

Presentation: *Nurse-led research to address the shared challenge of TB across both sides of the Timor Sea*

Emmy Foroasi, Sue Devin, and Dorothy Esau (L-R)

Baru Conservation Alliance, Solomon Islands / James Cook University

Presentation: *Experiences of women with TB in East Kwaio, Solomon Islands, explored through Tok Stori - a community-led, culturally embedded qualitative research methodology*

Following the presentations will be a discussion / Q&A

Australasian Clinical Tuberculosis Network and Australian Respiratory Council Nursing Research Webinar

2pm – 3.15pm AEST — Thursday 10th October
